

Online SafeGuard Management

Digital Risk Protection for High Profile Individuals & Sports Professionals

Get the help you need

Analyst Services

Our full risk profiling and pro-active investigation into identity exposure and misuse of Players details and social media profiles will help you lower digital risk for key individuals. We will also monitor the activity of identified groups or individuals that pose an ongoing threat.

Risk assessment and incident support for your Players

- In-depth investigations, using manual research methods
- Identification of impersonation accounts
- Identification of individuals/groups who might pose a threat
- Analysis of location where information posted

Advanced, ongoing analyst service

Full risk profiling report and pro-active investigation into identity exposure or misuse of personal details and social media profiles. Monthly report detailing exposure, investigations, and threat sources.

Player protection from CyberPatrol

Solution benefits

- Inform targeted players and warn of risks and threats
- Identify the source of information (e.g., social media, public records) and ensure privacy for targeted players
- Request the takedown of a post if possible

Active search features

- Search historical breached data
- Pro-actively monitor the deep, surface, and Dark Web for any mentions of your players in the future

Create flexible alerts monitors

- Email addresses
- Contact details, including post code
- Social media account names or handles

Round-the-clock monitoring to enhance social coverage*

The beauty of CyberPatrols Digital Risk Protection is its ability to monitor for virtually any type of information across the surface, deep and Dark Web - 24 hours a day. Be the first to know of threats to your players or exposed personal data with instant alerts by email, SMS or Slack. Enhanced Player monitoring with Analyst Services to handle specialist sources and extended social media coverage where automated data collection isn't possible.

***Each player is shielded; their sensitive data, assets and reputation are monitored 24/7 by our Threat Analysts (Ex-Military & Ex Metropolitan Police).**

Know if your Players are Targeted by Bad Actors

Doxing is the practice of publishing private information about an individual or organisation. Your senior management team or players important to your business operations may be targeted by criminals motivated by money, revenge, ideology, or other motives. Depending on the objectives of the hacker they may:

- Shame or harass a player, negatively impacting their reputation
- Attempt to expose compromising information which is then used to exhort or coerce
- Direct them to a bogus website to pharm personal information including passwords, next of kin etc
- Launch a physical attack

Early warning and ongoing monitoring of players allows us to pre-empt potential attacks and establish countermeasures to minimise or neutralise the threat. Cyberpatrol provides 24/7 monitoring for PII data and social media accounts and handles and provides analyst services to help you deal with the threat.
